Chapter 7: Thinking, Language, and Intelligence

Discovering **PSYCHOLOGY**
FIFTH EDITION
HOCKENBURY
HOCKENBURY

Thought

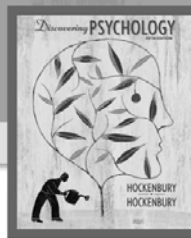

- Cognition—mental activities involved in acquiring, retaining, and using knowledge
- Thinking—manipulation of mental representations to draw inferences and conclusions
- Mental image—representation of objects or events that are not present

Discovering **PSYCHOLOGY**
FIFTH EDITION
HOCKENBURY
HOCKENBURY

Concepts

- Concept—mental category of objects or ideas based on shared properties
- Formal concept—mental category formed by learning rules
- Natural concept—mental category formed by everyday experience

Discovering **PSYCHOLOGY**
FIFTH EDITION
HOCKENBURY
HOCKENBURY

Examples of Concepts

- Formal concept—follows rigid rules, not usually intuitive (definition of a polygon)
- Natural concept—results from everyday experience (name some vehicles)

Problem-Solving Strategies

Algorithm

$$\sum y + \sum z = r^2$$

Problem-Solving Strategies

Heuristic—strategy that involves following a general rule of thumb to reduce the number of possible solutions

Insight and Intuition

- Insight—sudden realization of how a problem can be solved
- Intuition—coming to a conclusion without conscious awareness of the thought processes involved

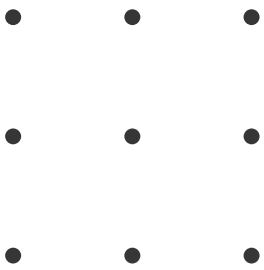

Functional Fixedness

- type of mental set
- inability to see an object as having a function other than its usual one

Discovering PSYCHOLOGY FIFTH EDITION
HOCKENBURY HOCKENBURY

Nine Dots Problem

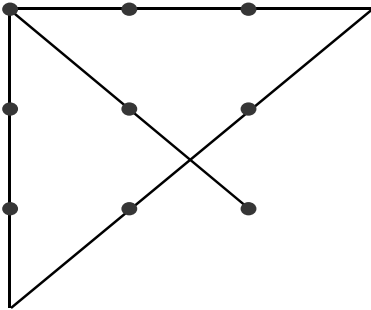

Without lifting your pencil or retracing any line, draw four straight lines that connect all nine dots

Discovering PSYCHOLOGY FIFTH EDITION
HOCKENBURY HOCKENBURY

Nine Dots Mental Set

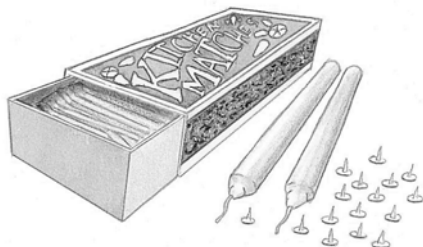

- Most people will not draw lines that extend from the square formed by the nine dots
- To solve the problem, you have to break your mental set

Discovering PSYCHOLOGY FIFTH EDITION
HOCKENBURY HOCKENBURY

Mounting Candle Problem

Using only the objects present on the right, attach the candle to the bulletin board in such a way that the candle can be lit and will burn properly

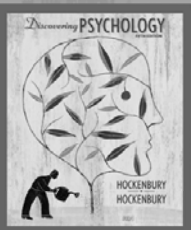

Discovering PSYCHOLOGY FIFTH EDITION
HOCKENBURY HOCKENBURY

Answer to Candle Problem

- Most people do not think of using the box for anything other than its normal use (to hold the tacks)
- To solve the problem, you have to overcome functional fixedness

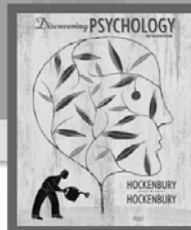

Discovering **PSYCHOLOGY** FIFTH EDITION
HOCKENBURY HOCKENBURY

Mental Set

Q: Why couldn't you solve the previous problems?

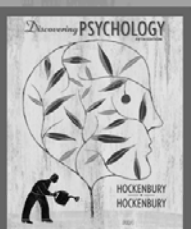

A: Mental set—a well-established habit of perception or thought

Discovering **PSYCHOLOGY** FIFTH EDITION
HOCKENBURY HOCKENBURY

Decision Making

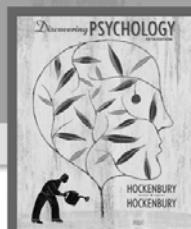

- Single-feature model—make a decision by focusing on only one feature
- Additive model—systematically evaluate the important features of each alternative
- Elimination by aspects model—rate choices based on features; eliminate those that do not meet the desired criteria, despite other desirable characteristics

Discovering **PSYCHOLOGY** FIFTH EDITION
HOCKENBURY HOCKENBURY

Availability Heuristic

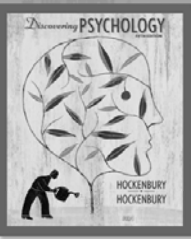

- Judge probability of an event by how easily you can recall previous occurrences of that event
- Most people will overestimate deaths from natural disasters because disasters are frequently on TV
- Most people will underestimate deaths from asthma because they don't make the local news

Discovering **PSYCHOLOGY** FIFTH EDITION
HOCKENBURY HOCKENBURY

Representative Heuristic

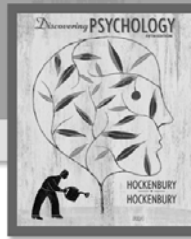

- Judge probability of an event based on how it matches a prototype
- Can be good
- But can also lead to errors
- Most will overuse this strategy

Discovering **PSYCHOLOGY**

HOCKENBURY
HOCKENBURY

Language

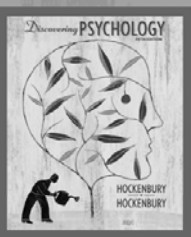

- Language and thinking
- Language and social perception
- Language and gender bias
- Animal communication

Discovering **PSYCHOLOGY**
FIFTH EDITION
HOCKENBURY
HOCKENBURY

The word duck does not look like a duck, walk like a duck, or quack like a duck, but refers to a duck all the same, because the members of a language community, as children, all memorized the pairing [between a sound and a meaning].

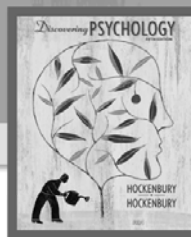

Steven Pinker (1995)

HOCKENBURY
HOCKENBURY

Language and Thinking

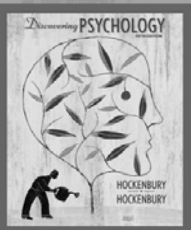

- Language is a system for combining arbitrary symbols to produce an infinite number of meaningful statements
- The linguistic relativity hypothesis is the notion that differences among languages cause differences in the thoughts of their speakers

Discovering **PSYCHOLOGY**
FIFTH EDITION
HOCKENBURY
HOCKENBURY

Animal Communication

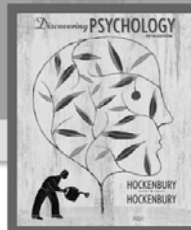

- Animals clearly communicate with each other, but is that language?
- Some trained primates demonstrate the same level of language comprehension as that of an average 2-year-old child
- Nonprimates can also acquire some language abilities (eg, dolphins, parrots)

HOCKENBURY
HOCKENBURY

Intelligence

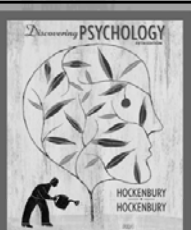

The global capacity to think rationally, act purposefully, and deal effectively with the environment

Discovering **PSYCHOLOGY**
FIFTH EDITION
HOCKENBURY
HOCKENBURY

Measuring Intelligence

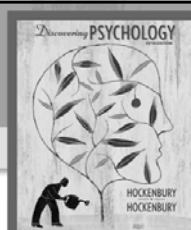

- Alfred Binet
- Mental age
- Chronological age
- IQ—comparison of people in similar age groups

Discovering **PSYCHOLOGY**
FIFTH EDITION
HOCKENBURY
HOCKENBURY

Alfred Binet (1857–1911)

- Intelligence—collection of higher-order mental abilities loosely related to one another
- Did not rank “normal” students according to the scores
- Intelligence is nurtured
- Binet-Simon Test developed in France, 1905

Discovering **PSYCHOLOGY**
FIFTH EDITION
HOCKENBURY
HOCKENBURY

Modern Intelligence Tests

The Stanford-Binet Scale

- modification of the original Binet-Simon after it came to the United States
- intelligence quotient (IQ)—child’s mental age divided by child’s chronological age
- still used widely in the United States, but not as much as in the past

Discovering PSYCHOLOGY FIFTH EDITION
HOCKENBURY HOCKENBURY

Modern Intelligence Tests

The Wechsler tests

- used more widely now than Stanford-Binet
- modeled after Binet's, also made adult test
 - WISC-III for children
 - WAIS-III for adults

Discovering PSYCHOLOGY FIFTH EDITION
HOCKENBURY HOCKENBURY

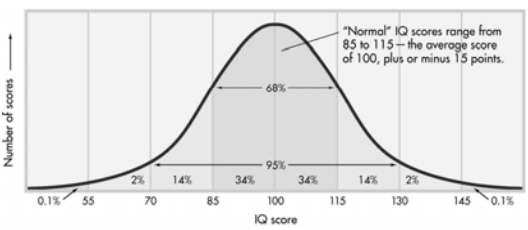

Qualities of Good Tests

- Standardized—administered to large groups of people under uniform conditions to establish norms
- Reliable—ability to produce consistent results when administered on repeated occasions under similar conditions
- Valid—ability to measure what the test is intended to measure

Discovering PSYCHOLOGY FIFTH EDITION
HOCKENBURY HOCKENBURY

Standardized Scoring of Wechsler Tests

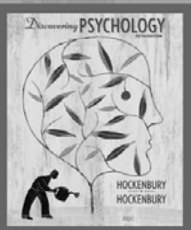

- All raw scores converted to standardized scores
- Normal distribution
- Mean of 100
- Standard deviation of 15

Discovering PSYCHOLOGY FIFTH EDITION
HOCKENBURY HOCKENBURY

How Valid Are IQ tests?

- Validity—test measures what it's intended to measure
- Does test correlate with other measures of same construct?
 - School achievement
 - IQ tests (ie, S-B and the Wechsler) correlate highly
 - BUT they were designed to test what you learn in school
- Prestigious positions
- On-the-job performance and other work-related variables

HOCKENBURY
HOCKENBURY

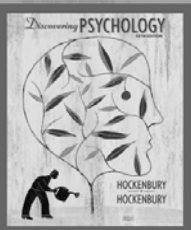

What Do IQ Tests Measure About Your Mind?

Mental speed and span of working memory

- typically use a digit span test to measure this
- more recent studies find significant correlations between reaction times and IQ scores

Why is this important?

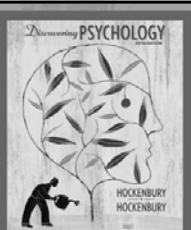

- mental quickness may expand capacity of working memory

Theories of Intelligence

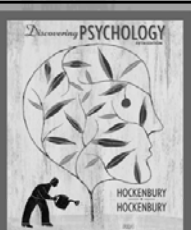

- Charles Spearman—*g* factor
- Louis Thurstone—intelligence as a person's "pattern" of mental abilities
- Howard Gardner—multiple intelligences
- Robert Sternberg—triarchic theory

FIFTH EDITION
Discovering PSYCHOLOGY
HOCKENBURY
HOCKENBURY

Howard Gardner's Multiple Intelligences

Linguistic intelligence	Adept use of language: poet, writer, public speaker, native storyteller
Logical-mathematical intelligence	Logical, mathematical, and scientific ability: scientist, mathematician, navigator, surveyor
Musical intelligence	Ability to create, synthesize, or perform music: musician, composer, singer
Spatial intelligence	Ability to mentally visualize the relationships of objects or movements: sculptor, painter, expert chess player, architect
Bodily-kinesthetic intelligence	Control of bodily motions and capacity to handle objects skillfully: athlete, dancer, craftsman
Interpersonal intelligence	Understanding of other people's emotions, motives, intentions: politician, salesperson, clinical psychologist
Intrapersonal intelligence	Understanding of one's own emotions, motives, and intentions: essayist, philosopher
Naturalist intelligence	Ability to discern patterns in nature: ecologist, zoologist, botanist

FIFTH EDITION
Discovering PSYCHOLOGY
HOCKENBURY
HOCKENBURY

Robert Sternberg

- Analytic intelligence—mental processes used in learning how to solve problems
- Creative intelligence—the ability to deal with novel situations by drawing on existing skills and knowledge
- Practical intelligence—the ability to adapt to the environment (street smarts)

Discovering PSYCHOLOGY FIFTH EDITION
HOCKENBURY HOCKENBURY

Nature Versus Nurture in IQ

- Are differences between people due to environmental or genetic differences?
- Misunderstanding the question
 - “Is a person’s intelligence due more to genes or to environment?”
 - both genes and intelligence crucial for any trait

Discovering PSYCHOLOGY FIFTH EDITION
HOCKENBURY HOCKENBURY

Heredity and Environment

Heritability

- The degree to which variation in trait stems from genetic, rather than environmental, differences among individuals

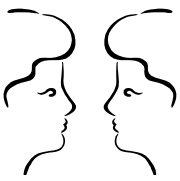

Environment

- The degree to which variation is due to environmental rather than genetic differences

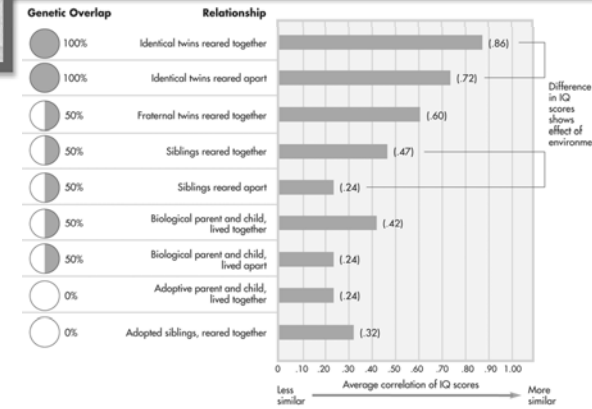

Discovering PSYCHOLOGY FIFTH EDITION
HOCKENBURY HOCKENBURY

Twin Studies and Family Influence

- If trait is genetic:
 - closely related more similar than less closely related
- Many close relatives share environments, too
- Types of studies to separate effects
 - monozygotic twins reared together
 - monozygotic twins reared apart
 - siblings/dizygotic reared together
 - siblings/dizygotic reared apart
 - adoptive siblings reared together

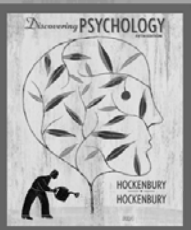

Discovering PSYCHOLOGY FIFTH EDITION
HOCKENBURY HOCKENBURY

Genetic Overlap	Relationship	Average correlation of IQ scores
100%	Identical twins reared together	0.86
100%	Identical twins reared apart	0.72
50%	Fraternal twins reared together	0.60
50%	Siblings reared together	0.47
50%	Siblings reared apart	0.24
50%	Biological parent and child, lived together	0.42
50%	Biological parent and child, lived apart	0.24
0%	Adoptive parent and child, lived together	0.24
0%	Adopted siblings, reared together	0.32

Difference in IQ scores shows effect of environment

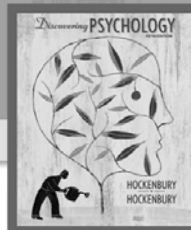

Less similar ← Average correlation of IQ scores → More similar

Discovering **PSYCHOLOGY**
FIFTH EDITION
HOCKENBURY
HOCKENBURY

Racial Difference in IQ

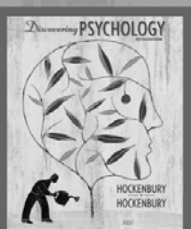

- Difference in average IQ among different racial groups can be measured
- More variation in IQ scores *within* a particular group than between groups

Discovering **PSYCHOLOGY**
FIFTH EDITION
HOCKENBURY
HOCKENBURY

Within and Between Group Differences

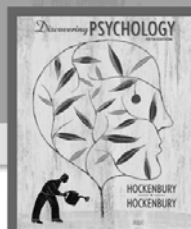

- Each corn field planted from same package of genetically diverse seeds
- One field is quite fertile, the other is not
- Within each field, the differences are due to genetics
- Between each field, the differences are due to environment (fertility)

Discovering **PSYCHOLOGY**
FIFTH EDITION
HOCKENBURY
HOCKENBURY

Other Influences on IQ Scores

- Cross-cultural studies show that the average IQ of groups subject to social discrimination are often lower than the socially dominant group even if there is no racial difference
- Tests reflect the culture in which they are developed; cultural factors also influence test-taking behavior (culture bias)

Discovering **PSYCHOLOGY**
FIFTH EDITION
HOCKENBURY
HOCKENBURY

Stereotype Threat

A psychological predicament in which you fear that you will be evaluated in terms of a negative stereotype about a group to which you belong; creates anxiety and self-doubt and can lower performance in a particular domain that is important to you

HOCKENBURY

Creativity

To enhance your creativity

- Creativity as a goal
- Reinforce creative behavior
- Engage in problem finding
- Acquire relevant knowledge
- Try different approaches
- Exert effort and expect setbacks
